Important information regarding the Programme Regulations

About this document

Last revised: 15 March 2024

As a student registered with the University of London you are governed by the current [General Regulations](#) and Programme Regulations associated with your programme of study.

These Programme Regulations are designed and developed by Goldsmiths which is responsible for the academic direction of the programme.

In addition to Programme Regulations, you will have to abide by the [General Regulations](#). These regulations apply to all students registered for a programme of study with the University of London and provide the rules governing registration and assessment on all programmes; they also indicate what you may expect on completion of your programme of study and how you may pursue a complaint, should that be necessary. Programme Regulations should be read in conjunction with the General Regulations.

The relevant General Regulations and the Programme Regulations relating to your registration with us are for the current year and not the year in which you initially registered.

On all matters where the regulations are to be interpreted, or are silent, our decision will be final.

Further information about your programme of study is outlined in the Programme Specification which is available on the relevant Courses page of the website. The Programme Specification gives a broad overview of the structure and content of the programme as well as the learning outcomes you will achieve as you progress.

To note

Throughout the Regulations, 'we' 'us' and 'our' mean the University of London; 'you' and 'your' mean the student, or where applicable, all students.

For the BSc Computer Science programmes, you should note the following terminology:

Module: Individual units of the programme are called modules. Each module is a self-contained, formally structured learning experience with a coherent and explicit set of learning outcomes and assessment criteria.

Core module: Core modules are central to the teaching and learning on the programme and may introduce concepts and ideas that appear in the compulsory and optional modules..

Compulsory module: Compulsory modules introduce concepts and ideas that appear in optional modules. Students must take these modules as part of their studies.

Optional module: Optional modules are designed to extend the concepts and ideas introduced in core and compulsory modules and to introduce other relevant concepts and techniques. Students select optional modules from a list.

Significant changes made to the Computer Science programme regulations 2024-2025

Programme structure

The following modules have been revised to reflect current practice. Modules have been updated from the October 2024 session:

- Web Development [CM1040]
- Computational Maths [CM1015]
- Fundamentals of Computer Science [CM1025]
- Introduction to Programming I [CM1005]
- Discrete Maths [CM1020]

Agile software projects [CM2020] will be phased out and will run for the last time in October 2024. No further registrations will be accepted on this module after October 2024. The last opportunity to sit the assessment for this module will be October 2026. Module **Professional Practice for Computer Scientists [CM2045]** will replace **Agile software projects [CM2020]** and will run for the first time in April 2025.

The following modules will be revised to reflect current practice. Modules will be updated from the April 2025 session:

- **Agile Software Projects [CM2020]** will be replaced by the new module **Professional Practice for Computer Scientists [CM2045]**
- **Programming with Data [CM2015]**
- **Databases, Networks and Web [CM2040]**
- **Graphics Programming [CM2030]**
- **Final Project [CM3070]**
- **Introduction to Programming II [CM1010]**

Additional modules to be updated in 2025-26, more information will be provided in early 2025.

Computer security [CM2025] will be renamed to **Cyber Security [CM2025]** from October 2025. The module will be revised to reflect current practice. All students enrolled on this module will be required to take the updated module.

Progression

Requirements to progress to the Final Project have been updated

Performance based admissions

The entrance requirements for performance based admissions have been updated

Extensions

Regulation **4.12** has been expanded to provide information on the provision of extensions.

1 Structure of the programme

See [Appendix A](#) for the full programme structure and [Appendix B](#) for module outlines.

Qualifications

1.1

The following qualifications are awarded under these regulations:

- Bachelor of Science in Computer Science
- Bachelor of Science in Computer Science (Data Science)
- Bachelor of Science in Computer Science (Machine Learning and Artificial Intelligence)
- Bachelor of Science in Computer Science (Web and Mobile Development)
- Bachelor of Science in Computer Science (User Experience)
- Bachelor of Science in Computer Science (Physical Computing and Internet of Things)
- Bachelor of Science in Computer Science (Games Development)
- Bachelor of Science in Computer Science (Virtual Reality)
- Graduate Diploma in Data Science
- Graduate Diploma in Machine Learning and Artificial Intelligence
- Graduate Diploma in Web Development
- Graduate Diploma in User Experience
- Graduate Diploma in Mobile Development
- Graduate Diploma in Physical Computing and Internet of Things
- Graduate Diploma in Games Development
- Graduate Diploma in Virtual Reality
- Graduate Certificate in Data Science
- Graduate Certificate in Machine Learning and Artificial Intelligence
- Graduate Certificate in Web Development
- Graduate Certificate in User Experience
- Graduate Certificate in Mobile Development
- Graduate Certificate in Physical Computing and Internet of Things
- Graduate Certificate in Games Development
- Graduate Certificate in Virtual Reality

The Diploma of Higher Education and Certificate of Higher Education are only available as exit qualifications to students studying a Bachelor of Science programme.

The Bachelor of Science (unclassified/pass degree) is only available as an exit qualification.

- Diploma of Higher Education in Computer Science
- Certificate of Higher Education in Computer Science
- Bachelor of Science in Computer Science (unclassified/pass degree)

Degree structures

1.2

For the award of Bachelor of Science (BSc) Computer Science you must complete:

- one **core** module and seven **compulsory** modules at FHEQ Level 4 totalling 120 credits, plus
- eight **compulsory** modules at FHEQ Level 5 totalling 120 credits, plus
- six **optional** modules and a **compulsory** project at FHEQ Level 6 totalling 120 credits

1.3

For the award of BSc Computer Science with a named specialism you must complete:

- one **core** module and seven **compulsory** modules at FHEQ Level 4 totalling 120 credits, plus
- eight **compulsory** modules at FHEQ Level 5 totalling 120 credits, plus
- five specialist **core** modules, **one** optional module and a **compulsory** project at FHEQ Level 6 totalling 120 credits

1.4

For the award of a **Graduate Diploma** you must complete:

- three **core** modules totalling 45 credits, plus
- three **compulsory** modules totalling 45 credits, plus
- a **compulsory** project totalling 30 credits

1.5

For the award of a **Graduate Certificate** you must complete:

- three **core** modules totalling 45 credits, plus
- one **compulsory** module totalling 15 credits

1.6

There are two study sessions each year beginning in **April** and **October**. The maximum number of modules you are allowed to register for in any one session is **five** (or three plus the final project).

This can be a combination of new modules and resits (with a maximum of **four** new modules), or resits only.

Over a 22 week session, a 15 credit module will typically require 150 hours of notional study hours. Each module, excluding the final project, is organised into 10 topics, with approximately 10-12 hours of study required per topic. The remaining study time is intended for coursework and written examination preparation.

Intermediate qualifications

Only students who first registered in 2022-23 and earlier are able to accumulate Intermediate awards.

1.7

Students may not request a lower intermediate qualification if studying on a higher qualification (except as an exit qualification) or accumulate these qualifications as they progress from lower to higher qualifications.

Exit qualifications

1.8

If you are registered on any of the BSc programmes and are unable to complete your studies for academic or personal reasons you may be eligible for an exit qualification.

1.9

We may award the Certificate of Higher Education in Computer Science as an exit qualification if you have successfully completed a minimum of **120 credits**. Neither Recognition of Prior Learning nor marginal condonement is permitted.

1.10

We may award the Diploma of Higher Education in Computer Science as an exit qualification if you have successfully completed a minimum of **240 credits**, with a minimum of 90 credits at Level 5. A maximum of 30 condoned credits and a maximum of 60 credits for Recognition of Prior Learning are permitted.

1.11

If you are registered on a Graduate Diploma and are unable to complete your studies, we may award the related Graduate Certificate as an exit qualification if you have successfully completed a minimum of **60 credits**, with a minimum of 45 credits at Level 6. Condoned credit is not permitted.

1.12

Exit qualifications are awarded at the discretion of the Board of Examiners. Once you have accepted a Certificate or Diploma of Higher Education in Computer Science as an exit qualification we will not normally permit you to register or re-register for a BSc under these regulations at a later date.

2 Registration

There are two Entry Routes into the BSc programmes: the Direct Entry Route and Performance Based Admission. See Entrance Requirements in the [Programme Specification](#), and the Requirements tab on the [programme's web-page](#), for full details.

Effective date of registration

2.1

Your effective date of registration will be either:

- **1 October** if you first register before the September registration deadline,
- **1 April** if you first register before the March registration deadline.

BSc registration

2.2

To complete the BSc programme within three years, you must aim to study and pass four modules per session. It is not possible to complete the programme within three years if you study less than four modules per session.

The minimum period of registration for BSc Computer Science is three years.

The maximum period of registration for BSc Computer Science is six years.

2.3

If you are registered on the Performance Based Admissions route, you will have a maximum of three years to complete the two required modules. Your six year registration period will begin from the point at which you register on the full BSc programme.

2.4

You may request a one-year extension to your BSc registration. This will be granted at the discretion of the Programme Director in exceptional circumstances only and should be requested at the end of your final year of registration.

Graduate Diploma and Graduate Certificate registration

2.5

The minimum period of registration for the Graduate Diploma is one year.

The maximum period of registration for the Graduate Diploma is five years.

2.6

The minimum period of registration for the Graduate Certificate is six months.

The maximum period of registration for the Graduate Diploma is five years.

2.7

Graduate Diploma or Graduate Certificate modules can be studied in any order.

Date of first written examinations

2.8

If your effective date of registration is:

- **1 October**, you will take your first written examination(s) in March of the following year,
- **1 April**, you will take your first written examination(s) in September of the same year.

Module availability

2.9

Where we are unable to provide an appropriate learning experience to meet the learning outcomes of the module due to insufficient student registrations, we may withdraw the module from that session. We will inform you of any such changes as early as possible and provide you with reasonable alternative arrangements.

3 Recognition of prior learning and credit transfer

Recognition of prior learning

See the [General Regulations](#) (Section 3) for more rules relating to Recognition of prior learning.

3.1

If you are registered on a full BSc programme, you may apply for recognition of prior learning (RPL) for up to **120 credits**.

3.2

If you are registered on the Performance Based Admissions entry route, we will not recognise or accredit prior learning for the required modules. These must be passed in order to progress onto the full BSc programme.

3.3

We will not recognise or accredit prior learning for the Final Project.

3.4

We will not recognise or accredit prior learning for a module later than 14 days after the module start date.

3.5

We consider RPL on the basis of studies successfully completed at an appropriate level.

3.6

There will be no RPL for modules included in the award of a Certificate of Higher Education in Computer Science. A maximum of 60 credits for RPL are permitted in the award of a Diploma of Higher Education in Computer Science.

3.7

We will not recognise or accredit prior learning for the Graduate Diploma or Graduate Certificate programmes.

Completing a graduate award then studying a BSc

3.8

Students who have completed a Graduate Diploma or Graduate Certificate are permitted to study a BSc award (subject to a new application). Students who have not yet completed their Graduate award will be required to complete this before studying a BSc.

3.9

Students who join the BSc after completing a Graduate award will be provided with a new registration period.

3.10

A credit transfer will be applied where there is an overlap between the structure of the Graduate Award and the chosen BSc specialism.

Transfer arrangements

3.11

Students currently registered on the following University of London programmes are permitted to transfer to BSc Computer Science:

- Computing and Information Systems
- Creative Computing

The transfer parameters, and specific details regarding the transfer process, are available within [Appendix D](#).

4 Assessment for the programme

Assessment methods

4.1

An examination is defined as an element of assessment that takes place in a controlled environment. You will be given details of how the courses on your programme are assessed, the specific environment or location that is permitted and the time allowed for the assessment. You will be contacted at least 5 months prior to the assessment session with these details.

All examinations are scheduled using an online delivery method. You must ensure that your device is kept up to date and complies with University Computer Requirements.

Wherever they are held, all examinations take place on the same dates and at specific times in line with the published timetables.

4.2

Each module, excluding the Final Project, is summatively assessed either by coursework or a combination of coursework and a two-hour unseen written examination.

4.3

The pass mark for any element of assessment is 40%.

4.4

The structure of assessment can take one of three types:

Assessment Structure	Element of assessment	Element weighting	To pass the module you must get:
Type I	Coursework	50%	At least 35% in each element of summative assessment and a combined weighted average of at least 40%, subject to the application of rules for condonement (regulations 4.25 to 4.31)
	Timed written examination	50%	
Type II	Coursework I	50%	At least 35% in each element of summative assessment and a combined weighted average of at least 40%, subject to the application of rules for condonement (regulations 4.25 to 4.31)
	Coursework II	50%	
Type III	Coursework I: Initial Report	30%	At least 35% in each element of summative assessment and a combined weighted average of at least 40%, subject to the application of rules for condonement (regulations 4.25 to 4.31)
	Coursework II: Final Report	70%	

Refer to [Appendix B](#) for the assessment structure for each module.

4.5

If you have a combined weighted average of 40% or above but you have achieved less than 35% in either element of assessment, your mark will be capped at 39% Fail (which will be subject to the application of rules for condonement at the point of classification).

4.6

Each coursework element may consist of multiple items of assessment.

Final Project

4.7

The summative assessment for the Final Project consists of both coursework and a written examination, weighted in the ratio 80:20. The examination will be a two-hour written exam consisting of questions relating to your project.

4.8

The coursework will consist of multiple items which you should submit according to the prescribed deadlines set out on the VLE.

4.9

Each item of coursework, totalling 80% of the overall mark for the Final Project, is weighted as follows:

Summative Assessment	Percentage of Overall Module
Project proposal	Pass/ Fail
Progress logs	5%
Preliminary Project Report	10%
Project presentation video	5%
Final project report and code	60%

Taking assessments

Refer to the rules on assessment and assessment offences in the [General Regulations](#).

See the website for the [list of examination centres](#).

4.10

Written examinations take place in March and September, at the end of each study session, with retakes in the next available session.

4.11

When you register for a module, you must take all elements of assessment in the session you have registered onto. If you do not take the assessment during the session for which you have registered, you will be required to pay a module continuation fee and take the assessment in a subsequent session.

4.12

For coursework and project items, you should not exceed the word limits by more than 10%. If the word count is between 10% to 20% above the word limit, five marks will be deducted. If the word count exceeds the word limit by more than 20%, you will receive a mark of zero for your work. If you do not submit your coursework and project items by the submission date you will **not** be granted an extension (please also refer to regulation **4.41**).

The content within the main body of text comprises the overall word count, including in-text citations, references, quotes, heading and sub-headings. The cover page, reference list and any appendices do not count towards the overall word count.

Plagiarism

This section should be read in conjunction with Section 8 of the [General Regulations](#).

4.13

Some items of assessment for this programme will require group work and, in some cases, a joint submission.

4.14

Where group work is required, and an allegation of plagiarism has been made, the work submitted will be subject to consideration as set out in the General Regulations [and on the website](#).

4.15

Following an investigation, any penalty imposed may be applied to all members of the group on behalf of whom the work was submitted.

4.16

All other work submitted for assessment must be entirely your own.

Resitting an element of assessment

If you retake one or more elements of assessment for a module you will have to pay a module continuation fee when you register for the module to retake the assessment. You may only register for a retake once your results have been ratified.

When you resit an element of assessment you are also retaking the whole module, you are therefore strongly advised to fully engage with the learning material to ensure you are fully prepared for the module assessment.

Assessment is updated in line with general module updates, and so may be different to the original assessment.

4.17

The maximum number of attempts permitted at any element of assessment is **three**.

4.18

If your overall result for a module is a fail, you may resit any element of assessment for which you achieved less than 40%, provided that you do not exceed the maximum number of attempts.

4.19

You will not be permitted to resit any element which you have passed.

4.20

If you retake an element of assessment, your most recent mark will be used for classification.

4.21

If you fail a **core** module at the third attempt, your registration on the degree will cease. If this is a core Level 6 module, you may be permitted to transfer to another BSc degree under these regulations, subject to the rules in [Section 6](#).

4.22

If you fail a **compulsory** module at the third attempt or an **optional** module which you cannot or do not choose to swap, you will no longer be eligible for the degree with honours. You may continue your studies to obtain a pass degree (unclassified) only.

See [Section 7](#) for the full scheme of award.

Swapping an optional module

4.23

You will be permitted to swap up to **two optional modules** for an alternative, where possible, providing you are still within the maximum period of registration. If you do so:

- You must inform us that you wish to withdraw from your current module
- You may commence the new module(s) at the next available opportunity
- You will have the full three attempts to pass the new module(s)

4.24

If you fail an **optional** module at the third attempt, you may register for an alternative module. Your mark for the new module will be used for the purposes of classification.

4.25

You will not be permitted to swap any module which you have already passed.

You are permitted to withdraw from a module within **14 days of the module start date**, with no financial penalty. After this point, you will need to pay a new module fee should you decide to swap for an available alternative.

Marginal condonement

4.26

If you fail a module with a mark of between 35% and 39%, you may be condoned, and have credit awarded in the same way as for passed modules, providing the mean average mark for the Level is 45% or above.

4.27

We will **not** permit marginal condonement for core modules or the Final project. They must be passed in order to be awarded a BSc qualification.

4.28

Condonement may be applied by the Board of Examiners at the point of classification only.

4.29

Where you obtain a mark in the condonable range, you may choose to resit until you become eligible for the final award, subject to the maximum number of attempts.

4.30

If, at the first attempt, you achieve a condonable fail mark for a module and, in subsequent attempts to redeem the failure, achieve further condonable fail marks, the highest mark obtained will be used for the purposes of classification.

4.31

A maximum of 30 credits may be condoned at any given Level.

4.32

The total credit value for which marginal condonement can be permitted may not exceed the amount specified for the programme as follows:

Qualification	Maximum credit value of marginal condonement
Certificate of Higher Education (Exit award)	0
Diploma of Higher Education (Exit award)	30
BSc	60 (no more than 30 at any one level)

Deferring an assessment

You will be notified of the deadlines for deferring a module during the study session. To defer, you must notify us via the *defer exams* button on the *my study* page in the [student portal](#). You will be provided instructions on this process during the study session once examination entry is closed.

If you defer taking a written examination, you have to pay a module continuation fee when you register for the session in which you wish to take the written examination.

Further information on deferring study can be found in the Additional considerations policy on the [student portal](#).

4.33

Following the mid-term assessment, you may defer taking the final examination of a module if you notify us by the deadline. You may only do so once per module.

4.34

You are only allowed to defer written examinations. You will not be permitted to defer a coursework element. If you miss the deadline for submission, you will be given a mark of zero for the assessment element and it **will** count as an attempt.

4.35

If you defer the final examination, but you obtained a mark of 40% or above in the coursework element, that mark will be carried forward.

4.36

If you defer the final examination, but you obtained a mark below 40% in the coursework, you must resit that element of assessment. This **will** be deemed a second attempt.

4.37

If you defer the final examination, you will not be deemed to have made an attempt at that element of assessment.

4.38

When you resume study of a deferred module, this will count towards the maximum number of credits you are permitted to study in any one session.

4.39

If you do not notify us of your deferral and do not attend the final examination, you will be given a mark of zero for that assessment element and it **will** count as an attempt.

Mitigating Circumstances

Mitigating circumstances are any serious circumstances beyond a student's control which may have adversely affected their academic performance. For more information about mitigating circumstances, see Section 11 of the [General Regulations](#) and the [Examinations section](#) of our website.

4.40

You must bring any mitigating circumstances to our attention as soon as you become aware that your performance may be adversely affected by serious circumstances beyond your control. You should do this before the deadline date for coursework, project items, and no later than three weeks after the written examination date.

For details on how to submit notifications and evidence of mitigating circumstances, see [the assessment resources section of the student portal](#).

4.41

If you have provided evidence of mitigating circumstances you may submit a request for an alternative session to continue your module studies.

4.42

This will be granted at the discretion of the Board of Examiners and in such cases we will allow you to defer all outstanding elements of assessment.

5 Progression within the programme

BSc Performance Based Admissions

Note that the minimum period of registration may be increased through entering the programme on the Performance Based Admissions route.

5.1

To enter the BSc via the Performance Based Admission route, you must first register for Introduction to Programming I and **either** Discrete Mathematics **or** Computational Mathematics. You are permitted to register on a maximum of 60 credits while registered on the PBA route.

5.2

You are permitted to register for 30 credits in your first study session. You will be permitted to register for another 30 credits in your second study session.

You are required to register for Introduction to Programming I and either Discrete Mathematics or Computational Mathematics in your first session subject to module availability. Where only one module is running in the session you will not be given a choice of module.

5.3

Your progression onto the full BSc programme will be permitted once you have passed 30 credits of Level 4 modules.

5.4

You must resit modules registered for, up to the maximum of three attempts. If you fail any of these modules at the third attempt, your registration will cease and you will not be eligible to continue studies. Marginal condonement will not be applicable to these modules.

5.6

If you fail Introduction to Programming I and either Discrete Mathematics or Computational Mathematics by 39% or less, you must resit the module(s), providing you have not exhausted all attempts and you are still within the maximum period of registration. If you do not resit, you will not be permitted to register on the remaining Level 4 modules

5.7

If you need to resit Discrete Mathematics or Computational Mathematics, you will be permitted to register on to the Mathematics module that you have not yet attempted.

5.8

If you register onto one Mathematics module then defer the assessment, for the following session you will be permitted to register on to the other Mathematics module.

See [Deferring an Assessment](#) for rules regarding deferrals.

Requirements to progress through the BSc

5.10

Pending RPL for qualifications yet to be awarded does not meet the progression requirements. If you request to progress based on pending RPL, you will be told to wait until the RPL is awarded before you can progress.

5.11

To progress to FHEQ Level 5 modules, you must have:

- passed, or been awarded credit through recognition of prior learning, for at least 45 credits at Level 4, including Introduction to Programming I and either Discrete or Computational Mathematics; and
- made an attempt at a further 30 credits at Level 4, including Introduction to Programming II; and
- registered for any Level 4 modules not yet attempted alongside Level 5 modules, excluding any for which you have been awarded credit through recognition of prior learning.

When planning your studies, you must take into account the time it will take for these assessments to be marked and graded.

Once registered for the October 2023 session, these modules will be examined in March 2024 and results for October session modules will be released while you are studying for the April 2024 session. Providing you have met the requirements of regulation 5.11 and have passed and attempted the requisite modules, you will be eligible to progress to Level 5 modules in the October 2024 session.

Once registered for the April 2024 session, these modules will be examined in September 2024 and results for April session modules will be released while you are studying for the October 2024 session. Providing you have met the requirements of regulation 5.11 and have passed and attempted the requisite modules, you will be eligible to progress to Level 5 modules in the April 2025 session.

5.12

To progress to FHEQ Level 6 modules, you must have:

- passed at least 45 credits at Level 5 including Object Oriented Programming **or** Software Design and Development; and
- made an attempt at a further 45 credits at Level 5 including Object Oriented Programming **or** Software Design and Development; and
- registered for any Level 5 modules not yet attempted alongside your Level 6 modules. If, for exceptional reasons, you have not attempted any Level 4 modules, you must also register on these alongside your Level 6 modules.

When planning your studies, you must take into account the time it will take for these assessments to be marked and graded. Once registered for the October 2024 session, these modules will be examined in March 2025 and results for October session modules will be released while you are studying for the April 2025 session. Providing you have met the requirements of regulation 5.12 and have passed and attempted the requisite modules, you will be eligible to progress to Level 6 modules in the October 2025 session.

Once registered for the April 2025 session, these modules will be examined in September 2026 and results for April session modules will be released while you are studying for the October 2025 session. Providing you have met the requirements of regulation 5.12 and have passed and attempted the requisite modules, you will be eligible to progress to Level 6 modules in the April 2026 session.

BSc Final Project

5.13

To register for the BSc Final Project, you must have:

- passed, or been awarded credit through recognition of prior learning for at least 210 credits at Level 4 and Level 5; and;
- made an attempt, or exhausted all permitted attempts, at all modules at Level 4 and Level 5; and
- made an attempt at a minimum of 45 credits at Level 6
- If you are permitted to progress to the BSc Final project you must register for any Level 4 or Level 5 modules not yet passed and Level 6 modules not yet attempted alongside the Final Project.

5.14

Where you have failed a compulsory module at the third attempt or an optional module which you cannot or do not choose to swap, you will be permitted to take the Final Project, and continue studies towards achieving a pass degree (unclassified) only. You will not be eligible for the BSc degree with honours.

Refer to [Regulations 4.36 to 4.38](#) for information on what will be deemed an attempt.

Graduate Diploma Final Project

5.15

In order to register for the Graduate Diploma Final Project, you must have made an attempt at a minimum of 45 credits from any combination of modules.

6 Transfer of Registration prior to graduation

6.1

If you transfer from one programme to another under these regulations, you will not be granted a new period of registration.

Transfer between BSc programmes within the Computer Science suite of awards

6.2

You may apply to transfer between BSc programmes offered under these regulations provided that:

- you have selected, or are still able to select, the core modules on the degree to which you wish to transfer;
- you are still within your maximum period of registration;
- you have not failed at the final attempt, a module that is core on the degree to which you wish to transfer;
- you have not passed more than one Level 6 module which does not fit on the degree to which you wish to transfer;
- you are not yet eligible for the BSc award upon which you are currently registered;

6.3

Upon transfer, you will be permitted to discard one passed module only which is not available on the degree to which you wish to transfer.

6.4

If your passed modules do not fit on to an alternative specialist degree, you may apply to transfer to the BSc in Computer Science only.

6.5

If you transfer between degree programmes we will transfer credit for:

- any modules that you have already passed provided they fit onto your new degree; and
- credit awarded for recognition of prior learning provided this remains applicable to your new degree.

6.6

The marks obtained in modules you have already passed, excluding any discarded module, will be taken into consideration for classification purposes. If you have been awarded credit for a module, we will not allow you to resit it upon transfer.

6.7

Any failed attempts made will be carried forward and will be counted towards the number of attempts permitted for the same modules following transfer.

6.8

If you are permitted to transfer between BSc programmes offered under these regulations, all modules studied will be listed on your final transcript when you receive your award. This includes modules which are discarded upon transfer.

Transfer between Graduate Certificates and Graduate Diplomas

6.9

You may apply to transfer your registration to an alternative Graduate Certificate or Graduate Diploma award provided that:

- you have selected, or are still able to select, the core and compulsory modules on the degree to which you wish to transfer;
- you are still within your maximum period of registration;
- you have not failed at the final attempt, a module that is core or compulsory on the programme to which you wish to transfer;
- you have not passed more than one module which does not fit on to the degree to which you wish to transfer;
- you are not yet eligible for the award upon which you are currently registered.

7 Scheme of award

If your last assessments take place in the October session, the date of award will be 1 May in the year of the last assessments that contribute to the award.

If your last assessments take place in the April session, the date of award will be 1 November in the year of the last assessments that contribute to the award.

BSc

7.1

To be considered for the qualification of a BSc degree with honours you are required to have passed modules to the value of **360 credits**. This may include recognition of prior learning and/or compensated fails where permitted.

7.2

A BSc will be classified according to the following scale:

Final average	Classification
70% or above	First Class Honours
60% - 69%	Second Class Honours (Upper Division)
50% - 59%	Second Class Honours (Lower Division)
40% - 49%	Third Class Honours
0 - 39%	Fail

7.3

Each module is worth 15 credits and the Final Project is worth 30 credits. To calculate the final grade for the degree, the marks for the modules are weighted according to credit value.

7.4

The final weighted average will be based on the marks obtained from **all** modules, including those eligible for inclusion through the marginal condonement rules.

7.5

When calculating a candidate's final degree classification, a relative weighting of 1:3:5 will be applied to modules at Levels 4, 5 and 6 respectively.

7.6

If you have credit for any module through RPL, the examiners will assess your class of Honours only upon the grades received for the modules you have undertaken with us for this programme.

Graduate Diploma and Graduate Certificate

7.7

To be considered for the award of the Graduate Diploma you are required to have attempted and passed modules to the value of **120 credits**, with a minimum of 90 being at Level 6.

7.8

For the Graduate Diploma, each module is worth 15 credits except the Final Project which is worth 30 credits. To calculate the final grade for the award, the marks for **all** modules are weighted according to credit value.

7.9

To be considered for the award of the Graduate Certificate you are required to have attempted and passed modules to the value of **60 credits**, with a minimum of 45 being at Level 6.

7.10

For the Graduate Certificate, the final average will be based on the marks obtained from **all** modules.

7.11

Both the Graduate Certificate and the Graduate Diploma will be classified according to the following scale:

Final average	Classification
70% or above	Distinction
60% - 69%	Merit
50% - 59%	Pass
40% - 49%	Pass
0 - 39%	Fail

Exit qualifications

7.12

If you are registered on a BSc and are unable to pass modules to a total value of 360 credits due to exhausting the permitted number of attempts, you may be eligible for an exit qualification of either a Certificate of Higher Education in Computer Science or a Diploma of Higher Education in Computer Science.

7.13

If you are registered on a Graduate Diploma and are unable to pass modules to a total value of 120 credits due to exhausting the permitted number of attempts, you may be eligible for an exit qualification of a Graduate Certificate relating to the specialism of your Graduate Diploma.

7.14

The scale used for classification of any exit qualification is:

Final average	Classification
40% or above	Pass
0 - 39%	Fail

Diploma of Higher Education in Computer Science, Certificate of Higher Education in Computer Science, and Pass degree (unclassified)

The Diploma of Higher Education and Certificate of Higher Education are only available as an exit qualification for students studying a Bachelor of Science programme.

The Bachelor of Science (unclassified/pass degree) is only available as an exit qualification.

7.15

If you are studying a BSc and have successfully completed at least **240 credits**, with a minimum of 90 credits at Level 5, you may be considered for the **Diploma of Higher Education in Computer Science** qualification.

7.16

The final Diploma of Higher Education in Computer Science mark is determined by an average of the marks obtained from each of the 16 modules studied; it will not include any module where credit was awarded for RPL.

7.17

If you are studying a BSc and have successfully completed at least **120 credits**, with a minimum of 90 credits at Level 4, you may be considered for the **Certificate of Higher Education in Computer Science** qualification. There will be no marginal condonement for modules included in this qualification.

7.18

The final Certificate of Higher Education in Computer Science mark is determined by an average of the marks obtained from each of the eight modules studied. Prior learning will not be recognised or accredited.

7.19

If you are registered on any of the BSc programmes, where you have attempted all 22 modules and the Final Project and have successfully completed at least **300 credits**, but less than 360, including Introduction to Programming I, you may be considered for a pass (unclassified) degree in Computer Science. You will not be eligible for any of the specialist degree qualifications.

Appendix A – Structure of the programme

Refer to [Appendix B](#) for full module descriptions.

It is expected that students who are registered on a specialist degree programme will complete a final project in line with the specialist subject area.

Some modules have additional hardware and software requirements. Refer to the [Programme Specification](#) for further information.

BSc Computer Science

Level 4

One core module:

- Introduction to programming I [CM1005]

+

Seven compulsory modules:

- Introduction to programming II [CM1010]
- Computational mathematics [CM1015]
- Discrete mathematics [CM1020]
- Fundamentals of computer science [CM1025]
- How computers work [CM1030]
- Algorithms and data structures I [CM1035]
- Web development [CM1040]

Level 5

Eight compulsory modules:

- Object oriented programming [CM2005]
- Software design and development [CM2010]
- Programming with data [CM2015]
- Agile software projects [CM2020]**
- Computer security [CM2025]
- Graphics programming [CM2030]
- Algorithms and data structures II [CM2035]
- Databases, networks and the web [CM2040]
- Professional Practice for Computer Scientists [CM2045]+

Level 6

Six optional modules chosen from the list:

- Data science [CM3005]
- Databases and advanced data techniques [CM3010]
- Machine learning and neural networks [CM3015]
- Artificial intelligence [CM3020]
- Virtual reality [CM3025]
- Games development [CM3030]
- Advanced web development [CM3035]
- Physical computing and internet of things [CM3040]
- 3D graphics and animation [CM3045]
- Mobile development [CM3050]
- Interaction design [CM3055]
- Natural language processing [CM3060]
- Intelligent signal processing [CM3065]

+

One 30 credit project:

- Final project [CM3070]

****Agile software projects [CM2020]** will be phased out and will run for the last time in October 2024. No further registrations will be accepted on this module after October 2024. The last opportunity to sit the assessment for this module will be October 2026. Module **Professional Practice for Computer Scientists [CM2045]** will replace Agile software projects [CM2020] and will run for this first time in April 2025.

+ Professional Practice for Computer Scientists [CM2045] is available from April 2025.

BSc Computer Science (Data Science)

Level 4

One core module:

- Introduction to programming I [CM1005]

+

Seven compulsory modules:

- Introduction to programming II [CM1010]
- Computational mathematics [CM1015]
- Discrete mathematics [CM1020]
- Fundamentals of computer science [CM1025]
- How computers work [CM1030]
- Algorithms and data structures I [CM1035]
- Web development [CM1040]

Level 5

Eight compulsory modules:

- Object oriented programming [CM2005]
- Software design and development [CM2010]
- Programming with data [CM2015]
- Agile software projects [CM2020]**
- Computer security [CM2025]
- Graphics programming [CM2030]
- Algorithms and data structures II [CM2035]
- Databases, networks and the web [CM2040]
- Professional Practice for Computer Scientists [CM2045]+

Level 6

Five specialist core modules:

- Data science [CM3005]
- Databases and advanced data techniques [CM3010]
- Machine learning and neural networks [CM3015]
- Advanced web development [CM3035]
- Natural language processing [CM3060]

+

One optional module chosen from the list:

- Artificial intelligence [CM3020]
- Virtual reality [CM3025]
- Games development [CM3030]
- Physical computing and internet of things [CM3040]
- 3D graphics and animation [CM3045]
- Mobile development [CM3050]
- Interaction design [CM3055]
- Intelligent signal processing [CM3065]

+

One 30 credit project:

- Final project [CM3070]

****Agile software projects [CM2020]** will be phased out and will run for the last time in October 2024. No further registrations will be accepted on this module after October 2024. The last opportunity to sit the assessment for this module will be October 2026. Module **Professional Practice for Computer Scientists [CM2045]** will replace Agile software projects [CM2020] and will run for this first time in April 2025.

+ Professional Practice for Computer Scientists [CM2045] is available from April 2025.

BSc Computer Science (Machine Learning and Artificial Intelligence)

Level 4

One core module:

- Introduction to programming I [CM1005]

+

Seven compulsory modules:

- Introduction to programming II [CM1010]
- Computational mathematics [CM1015]
- Discrete mathematics [CM1020]
- Fundamentals of computer science [CM1025]
- How computers work [CM1030]
- Algorithms and data structures I [CM1035]
- Web development [CM1040]

Level 5

Eight compulsory modules:

- Object oriented programming [CM2005]
- Software design and development [CM2010]
- Programming with data [CM2015]
- Agile software projects [CM2020]**
- Computer security [CM2025]
- Graphics programming [CM2030]
- Algorithms and data structures II [CM2035]
- Databases, networks and the web [CM2040]
- Professional Practice for Computer Scientists [CM2045]⁺

Level 6

Five specialist core modules:

- Databases and advanced data techniques [CM3010]
- Machine learning and neural networks [CM3015]
- Natural language processing [CM3060]
- Artificial intelligence [CM3020]
- Intelligent signal processing [CM3065]

+

One optional module chosen from the list:

- Data science [CM3005]
- Virtual reality [CM3025]
- Games development [CM3030]
- Advanced web development [CM3035]
- Physical computing and internet of things [CM3040]
- 3D graphics and animation [CM3045]
- Mobile development [CM3050]
- Interaction design [CM3055]

+

One 30 credit project:

- Final project [CM3070]

****Agile software projects [CM2020]** will be phased out and will run for the last time in October 2024. No further registrations will be accepted on this module after October 2024. The last opportunity to sit the assessment for this module will be October 2026. Module **Professional Practice for Computer Scientists [CM2045]** will replace Agile software projects [CM2020] and will run for this first time in April 2025.

+Professional Practice for Computer Scientists [CM2045] will be available from April 2025

BSc Computer Science (User Experience)

Level 4

One core module:

- Introduction to programming I [CM1005]

+

Seven compulsory modules:

- Introduction to programming II [CM1010]
- Computational mathematics [CM1015]
- Discrete mathematics [CM1020]
- Fundamentals of computer science [CM1025]
- How computers work [CM1030]
- Algorithms and data structures I [CM1035]
- Web development [CM1040]

Level 5

Eight compulsory modules:

- Object oriented programming [CM2005]
- Software design and development [CM2010]
- Programming with data [CM2015]
- Agile software projects [CM2020]**
- Computer security [CM2025]
- Graphics programming [CM2030]
- Algorithms and data structures II [CM2035]
- Databases, networks and the web [CM2040]
- Professional Practice for Computer Scientists [CM2045]+

Level 6

Five specialist core modules:

- Virtual reality [CM3025]
- Advanced web development [CM3035]
- Physical computing and internet of things [CM3040]
- Mobile development [CM3050]
- Interaction design [CM3055]

+

One optional module chosen from the list:

- Databases and advanced data techniques [CM3010]
- Machine learning and neural networks [CM3015]
- Artificial intelligence [CM3020]
- Data science [CM3005]
- Games development [CM3030]
- 3D graphics and animation [CM3045]
- Natural language processing [CM3060]
- Intelligent signal processing [CM3065]

+

One 30 credit project:

- Final project [CM3070]

****Agile software projects [CM2020]** will be phased out and will run for the last time in October 2024. No further registrations will be accepted on this module after October 2024. The last opportunity to sit the assessment for this module will be October 2026. Module **Professional Practice for Computer Scientists [CM2045]** will replace Agile software projects [CM2020] and will run for this first time in April 2025.

+Professional Practice for Computer Scientists [CM2045] will be available from April 2025

BSc Computer Science (Web and Mobile Development)

Level 4

One core module:

- Introduction to programming I [CM1005]

+

Seven compulsory modules:

- Introduction to programming II [CM1010]
- Computational mathematics [CM1015]
- Discrete mathematics [CM1020]
- Fundamentals of computer science [CM1025]
- How computers work [CM1030]
- Algorithms and data structures I [CM1035]
- Web development [CM1040]

Level 5

Eight compulsory modules:

- Object oriented programming [CM2005]
- Software design and development [CM2010]
- Programming with data [CM2015]
- Agile Software Projects [CM2020]**
- Computer security [CM2025]
- Graphics programming [CM2030]
- Algorithms and data structures II [CM2035]
- Databases, networks and the web [CM2040]
- Professional Practice for Computer Scientists [CM2045]+

Level 6

Five specialist core modules:

- Databases and advanced data techniques [CM3010]
- Advanced web development [CM3035]
- 3D graphics and animation [CM3045]
- Mobile development [CM3050]
- Interaction design [CM3055]

+

One optional module chosen from the list:

- Data science [CM3005]
- Machine learning and neural networks [CM3015]
- Artificial intelligence [CM3020]
- Virtual reality [CM3025]
- Games development [CM3030]
- Physical computing and internet of things [CM3040]
- Natural language processing [CM3060]
- Intelligent signal processing [CM3065]

+

One 30 credit project:

- Final project [CM3070]

****Agile software projects [CM2020]** will be phased out and will run for the last time in October 2024. No further registrations will be accepted on this module after October 2024. The last opportunity to sit the assessment for this module will be October 2026. Module **Professional Practice for Computer Scientists [CM2045]** will replace Agile software projects [CM2020] and will run for this first time in April 2025.

+Professional Practice for Computer Scientists [CM2045] will be available from April 2025

BSc Computer Science (Physical Computing and the Internet of Things)

Level 4

One core module:

- Introduction to programming I [CM1005]

+

Seven compulsory modules:

- Introduction to programming II [CM1010]
- Computational mathematics [CM1015]
- Discrete mathematics [CM1020]
- Fundamentals of computer science [CM1025]
- How computers work [CM1030]
- Algorithms and data structures I [CM1035]
- Web development [CM1040]

Level 5

Eight compulsory modules:

- Object oriented programming [CM2005]
- Software design and development [CM2010]
- Programming with data [CM2015]
- Agile software projects [CM2020]**
- Computer security [CM2025]^
- Graphics programming [CM2030]
- Algorithms and data structures II [CM2035]
- Databases, networks and the web [CM2040]
- Professional Practice for Computer Scientists [CM2045]^

Level 6

Five specialist core modules:

- Databases and advanced data techniques [CM3010]
- Advanced web development [CM3035]
- Physical computing and internet of things [CM3040]
- Interaction design [CM3055]
- Intelligent signal processing [CM3065]

+

One optional module chosen from the list:

- Data science [CM3005]
- Machine learning and neural networks [CM3015]
- Artificial intelligence [CM3020]
- Virtual reality [CM3025]
- Games development [CM3030]
- 3D graphics and animation [CM3045]
- Mobile development [CM3050]
- Natural language processing [CM3060]

+

One 30 credit project:

- Final project [CM3070]

****Agile software projects [CM2020]** will be phased out and will run for the last time in October 2024. No further registrations will be accepted on this module after October 2024. The last opportunity to sit the assessment for this module will be October 2026. Module **Professional Practice for Computer Scientists [CM2045]** will replace Agile software projects [CM2020] and will run for this first time in April 2025.

+Professional Practice for Computer Scientists [CM2045] will be available from April 2025.

BSc Computer Science (Games Development)

Level 4

One core module:

- Introduction to programming I [CM1005]

+

Seven compulsory modules:

- Introduction to programming II [CM1010]
- Computational mathematics [CM1015]
- Discrete mathematics [CM1020]
- Fundamentals of computer science [CM1025]
- How computers work [CM1030]
- Algorithms and data structures I [CM1035]
- Web development [CM1040]

Level 5

Eight compulsory modules:

- Object oriented programming [CM2005]
- Software design and development [CM2010]
- Programming with data [CM2015]
- Agile software projects [CM2020]**
- Computer security [CM2025]
- Graphics programming [CM2030]
- Algorithms and data structures II [CM2035]
- Databases, networks and the web [CM2040]
- Professional Practice for Computer Scientists [CM2045]+

Level 6

Five specialist core modules:

- Artificial intelligence [CM3020]
- Virtual reality [CM3025]
- Games development [CM3030]
- 3D graphics and animation [CM3045]
- Interaction design [CM3055]

+

One optional module chosen from the list:

- Data science [CM3005]
- Databases and advanced data techniques [CM3010]
- Machine learning and neural networks [CM3015]
- Advanced web development [CM3035]
- Physical computing and internet of things [CM3040]
- Mobile development [CM3050]
- Natural language processing [CM3060]
- Intelligent signal processing [CM3065]

+

One 30 credit project:

- Final project [CM3070]

****Agile software projects [CM2020]** will be phased out and will run for the last time in October 2024. No further registrations will be accepted on this module after October 2024. The last opportunity to sit the assessment for this module will be October 2026. Module **Professional Practice for Computer Scientists [CM2045]** will replace Agile software projects [CM2020] and will run for this first time in April 2025.

+Professional Practice for Computer Scientists [CM2045] will be available from April 2025.

BSc Computer Science (Virtual Reality)

Level 4

One core module:

- Introduction to programming I [CM1005]

+

Seven compulsory modules:

- Introduction to programming II [CM1010]
- Computational mathematics [CM1015]
- Discrete mathematics [CM1020]
- Fundamentals of computer science [CM1025]
- How computers work [CM1030]
- Algorithms and data structures I [CM1035]
- Web development [CM1040]

Level 5

Eight compulsory modules:

- Object oriented programming [CM2005]
- Software design and development [CM2010]
- Programming with data [CM2015]
- Agile software projects [CM2020]**
- Computer security [CM2025]
- Graphics programming [CM2030]
- Algorithms and data structures II [CM2035]
- Databases, networks and the web [CM2040]
- Professional Practice for Computer Scientists [CM2045]+

Level 6

Five specialist core modules:

- Virtual reality [CM3025]
- Games development [CM3030]
- 3D graphics and animation [CM3045]
- Mobile development [CM3050]
- Interaction design [CM3055]

+

One optional module chosen from the list:

- Data science [CM3005]
- Databases and advanced data techniques [CM3010]
- Machine learning and neural networks [CM3015]
- Artificial intelligence [CM3020]
- Advanced web development [CM3035]
- Physical computing and internet of things [CM3040]
- Natural language processing [CM3060]
- Intelligent signal processing [CM3065]

+

One 30 credit project:

- Final project [CM3070]

****Agile software projects [CM2020]** will be phased out and will run for the last time in October 2024. No further registrations will be accepted on this module after October 2024. The last opportunity to sit the assessment for this module will be October 2026. Module **Professional Practice for Computer Scientists [CM2045]** will replace Agile software projects [CM2020] and will run for this first time in April 2025.

+Professional Practice for Computer Scientists [CM2045] will be available from April 2025.

Graduate Diploma in Data Science

Three core modules:

- Programming with Data [CM2015]
- Data Science [CM3005]
- Machine Learning and Neural Networks [CM3015]

+

Three compulsory modules:

- Databases and Advanced Data Techniques [CM3010]
- Advanced Web Development [CM3035]
- Natural Language Processing [CM3060]

+

One 30 credit project:

- Final Project [CM3070]

Graduate Diploma in Machine Learning and Artificial Intelligence

Three core modules:

- Programming with Data [CM2015]
- Machine Learning and Neural Networks [CM3015]
- Artificial Intelligence [CM3020]

+

Three compulsory modules:

- Data Bases and Advanced Data Techniques [CM3010]
- Natural Language Processing [CM3060]
- Intelligent Signal Processing [CM3065]

+

One 30 credit project:

- Final Project [CM3070]

Graduate Diploma in User Experience

Three core modules:

- Agile Software Projects [CM2020]**
- Mobile Development [CM3050]
- Interaction Design [CM3055]
- Professional Practice for Computer Scientists [CM2045]⁺

+

Three compulsory modules:

- Advanced Web Development [CM3035]
- Virtual Reality [CM3025]
- Physical Computing and internet of things [CM3040]

+

One 30 credit project:

- Final Project [CM3070]

****Agile software projects [CM2020]** will be phased out and will run for the last time in October 2024. No further registrations will be accepted on this module after October 2024. The last opportunity to sit the assessment for this module will be October 2026. Module **Professional Practice for Computer Scientists [CM2045]** will replace =software projects [CM2020] and will run for this first time in April 2025.

⁺ Professional Practice for Computer Scientists [CM2045] will be available from April 2025.

Graduate Diploma in Web Development

Three core modules:

- Databases, Networks and the Web [CM2040]
- Databases and Advanced Techniques [CM3010]
- Advanced Web Development [CM3035]

+

Three compulsory modules:

- Interaction Design [CM3055]
- Agile Software Projects [CM2020]**
- Mobile Development [CM3050]
- Professional Practice for Computer Scientists [CM2045]⁺

+

One 30 credit project:

- Final Project [CM3070]

****Agile software projects [CM2020]** will be phased out and will run for the last time in October 2024. No further registrations will be accepted on this module after October 2024. The last opportunity to sit the assessment for this module will be October 2026. Module **Professional Practice for Computer Scientists [CM2045]** will replace Agile software projects [CM2020] and will run for this first time in April 2025.

+Professional Practice for Computer Scientists [CM2045] will be available from April 2025.

Graduate Diploma in Mobile Development

Three core modules:

- Object-Oriented Programming (Level 5) [CM2005]
- Databases and Advanced Data Techniques [CM3010]
- Mobile Development [CM3050]

+

Three compulsory modules:

- Advanced Web Development [CM3035]
- 3D Graphics and Animation [CM3045]
- Interaction Design [CM3055]

+

- A Final Project [CM3070]

Graduate Diploma in Physical Computing and the Internet of Things

Three core modules:

- Databases, Networks and the Web [CM2040]
- Physical Computing and internet of things [CM3040]
- Intelligent Signal Processing [CM3065]

+

Three compulsory modules:

- Advanced Web Development [CM3035]
- Databases and Advanced Data Techniques [CM3010]
- Interaction Design [CM3055]

+

One 30 credit project:

- Final Project [CM3070]

Graduate Diploma in Games Development

Three core modules:

- Object Oriented Programming [CM2005]
- Games Development [CM3030]
- 3D Graphics and Animation [CM3045]

+

Three compulsory modules:

- Artificial Intelligence [CM3020]
- Virtual Reality [CM3025]
- Interaction Design [CM3055]

+

One 30 credit project:

- Final Project [CM3070]

Graduate Diploma in Virtual Reality

Three core modules:

- Graphics Programming [CM2030]
- Virtual Reality [CM3025]
- 3D Graphics and Animation [CM3045]

+

Three compulsory modules:

- Interaction Design [CM3055]
- Games Development [CM3030]
- Mobile Development [CM3050]

+

One 30 credit project:

- Final Project [CM3070]

Graduate Certificate in Data Science

Three core modules:

- Programming with Data [CM2015]
- Data Science [CM3005]
- Machine Learning and Neural Networks [CM3015]

+

One compulsory module:

- Databases and Advanced Data Techniques [CM3010]

Graduate Certificate in Machine Learning and Artificial Intelligence

Three core modules:

- Programming with Data [CM2015]⁺
- Machine Learning and Neural Networks [CM3015]
- Artificial Intelligence [CM3020]

+

One compulsory module:

- Data Bases and Advanced Data Techniques [CM3010]

Graduate Certificate in User Experience

Three core modules:

- Agile Software Projects [CM2020]**
- Mobile Development [CM3050]
- Interaction Design [CM3055]
- Professional Practice for Computer Scientists [CM2045]⁺

+

One compulsory module:

- Advanced Web Development [CM3035]

****Agile software projects [CM2020]** will be phased out and will run for the last time in October 2024. No further registrations will be accepted on this module after October 2024. The last opportunity to sit the assessment for this module will be October 2026. Module **Professional Practice for Computer Scientists [CM2045]** will replace Agile software projects [CM2020] and will run for this first time in April 2025.

⁺Professional Practice for Computer Scientists [CM2045] will be available from April 2025.

Graduate Certificate in Web Development

Three core modules:

- Databases, Networks and the Web (Level 5) [CM2040]
- Databases and Advanced Techniques [CM3010]
- Advanced Web Development [CM3035]

+

One compulsory module:

- Interaction Design [CM3055]

Graduate Certificate in Mobile Development

Three core modules:

- Object-Oriented Programming [CM2005]
- Databases and Advanced Data Techniques [CM3010]
- Mobile Development [CM3050]

+

One compulsory module:

- Advanced Web Development [CM3035]

Graduate Certificate in Physical Computing and the Internet of Things

Three core modules:

- Databases, Networks and the Web [CM2040]
- Physical Computing and internet of things [CM3040]
- Intelligent Signal Processing [CM3065]

+

One compulsory module:

- Advanced Web Development [CM3035]

Graduate Certificate in Games Development

Three core modules:

- Object Oriented Programming [CM2005]
- Games Development [CM3030]
- 3D Graphics and Animation [CM3045]

+

One compulsory module:

- Artificial Intelligence [CM3020]

Graduate Certificate in Virtual Reality

Three core modules:

- Graphics Programming [CM2030]
- Virtual Reality [CM3025]
- 3D Graphics and Animation [CM3045]

+

One compulsory module:

- Interaction Design [CM3055]

Appendix B – Module Outlines

Topics covered in each module may be revised to ensure currency and relevance. Students will be advised of any changes in advance of their study. See module descriptors under the Structure tab on the website for further information and any updates.

Level 4

Introduction to programming I [CM1005]

This module is focused on basic programming techniques. By taking this module, you will learn how to use the basic elements of computer programming such as variables, conditionals, functions and loops. You will also learn how to create interactive, graphical computer programs. You will also be

Assessment: Coursework only (Type II)

Introduction to programming II [CM1010]

This module is focused on adding to the basic programming skill set you developed in Introduction to Programming I and giving you experience working with existing code and third-party libraries. By taking this module, you will learn how to customise existing code, to implement basic object orientation and to work with a range of third-party libraries.

Assessment: Coursework only (Type III)

Computational mathematics [CM1015]

This module helps you hone your skills in thinking abstractly. It also introduces you to many of the standard continuous models used to help understand and design computational systems. Through this module, you will develop the fundamental computational mathematical tools that will support you throughout the BSc programme. Particular attention is paid to notions of experimentation, reasoning, and generalisation. By taking this module, you will learn a wide range of the computational mathematical concepts and techniques that underpin Computer Science. In particular, you will study number systems, special functions, graphing and linear algebra.

Assessment: One two hour unseen written examination and coursework (Type I)

Discrete mathematics [CM1020]

This module helps you to hone your skills in thinking abstractly. It also introduces you to many of the standard discrete models used to help understand and design computational systems. Through this module, you will develop the fundamental discrete mathematical tools that will support you throughout the BSc programme. Particular attention is paid to notions of experimentation, reasoning, and generalisation.

Assessment: One two hour unseen written examination and coursework (Type I)

Fundamentals of computer science [CM1025]

By taking this module, you will gain a broad understanding of many of the key topic areas in computer science and the fundamental concepts that underpin them. In the area of fundamental concepts, you will study binary representations and logic, complexity theory and theories of computation, finite state machines and Turing machines. Building on this, you will then study key areas of interest in computer science including databases, artificial intelligence, and machine learning. These will be presented in the light of practical examples to illustrate how they are implemented in modern computer systems.

Assessment: One two hour unseen written examination and coursework (Type I)

How computers work [CM1030]

This module aims to help you understand, and to interact with, computer systems. You will learn how to use knowledge about computational processes to analyse and explain the behaviour of computer systems. The module will use the concept of a Notional Machine, an abstract representation of the functioning of a computer system, to help you to reason about computer systems and to predict their behaviour. You will also learn about typical computer system architectures, basic networking and network services such as databases.

Assessment: One two hour unseen written examination and coursework (Type I)

Algorithms and data structures I [CM1035]

This module aims to help you to develop your analytical and problem-solving skills, particularly concerning thinking algorithmically. The module will encourage you to start thinking about how to use computers to solve problems. You will develop skills in thinking algorithmically and learn the central concepts of algorithms and data structures. You will learn about linear data structures such as arrays, vectors and lists, and a unifying framework for considering such data structures as collections. You will learn how algorithms can be expressed as flowcharts and pseudocode, and how to convert these expressions into running programs. You will learn specific algorithms used for sorting and searching, and how to express repetition as iteration and recursion. You will learn a simple model for execution of computation, and how to describe computational problems and their solutions. The model will allow you to compare algorithms regarding their correctness and regarding their efficiency.

Assessment: One two hour unseen written examination and coursework (Type I)

Web development [CM1040]

The Web Development module equips you with the skills to design and implement dynamic web applications using foundational web programming concepts and frameworks. The course considers practical skills such as responsive design with CSS as well as the abstract underpinnings of markup languages. The course extends beyond general web programming and into areas of professional practice. These include accessibility standards and ethical, security, and sustainability aspects of web development. The course also considers team working scenarios; you will learn about how teams carry out the full process of developing a web site from assigning roles, through requirements gathering, onto testing and then deployment. The course culminates with an exploration of the exciting intersection of Generative AI and web development, preparing you for the future of the industry.

Assessment: Coursework only (Type III)

Level 5

Object oriented programming [CM2005]

This module aims to provide you with an object-oriented programming skill set. You will learn what objects and classes are and how to write your classes. You will see how objects can interact with each other, including defining and implementing interfaces to control the interaction. You will learn how to use inheritance to inherit and extend functionality from parent classes. You will learn how to write code according to style guidelines and how to write formal code documentation.

Assessment: Coursework only (Type II)

Software design and development [CM2010]

This module aims to advance your software development skills so that you can write more robust and complicated programs. You will learn how to use a range of programming techniques that will allow you to deal with unwanted or unexpected events that might happen when your application is running. You will use defensive coding to check data before processing it, and exception handling to gracefully manage unforeseen or unwanted occurrences. You will learn how to discuss program structure concerning cohesion (how to meaningfully organise code into modules) and coupling (how to define the interactions between different parts of the program). You will learn about test-driven development, where you write tests for your code, and write the code itself, in parallel. You will also learn how to use software versioning tools to manage a software project as it develops.

Assessment: One two hour unseen written examination and coursework (Type I)

Programming with data [CM2015]

This course aims to provide a comprehensive understanding of Python programming and its application in data analysis. Beginning with foundational Python concepts, students will explore data structures, file operations, and the intricacies of development environments. Emphasis is placed on crafting modular, reusable, and well-documented code, ensuring students are adept in software engineering principles. The curriculum delves into data sourcing from databases and the web, whilst highlighting the importance of ethics, privacy, and transparency. As students progress, they will harness Python libraries for data visualization and analysis, tackle advanced programming topics like optimization and multithreading, and integrate pre-trained models for sophisticated analytical tasks. By the course's end, participants will not only be proficient Python programmers but also responsible data analysts, aware of the broader implications of their work

Assessment: One two hour unseen written examination and coursework (Type I)

Professional Practice for Computer Scientists module [CM2045]

This module prepares you for post-graduation computing careers by enhancing your technical education with broader professional skills. It introduces foundational ethical, legal, and regulatory principles, emphasizing responsible computing practices. Students will refine their communication skills, essential for teamwork and stakeholder engagement. The course explores sustainability, ethics, and risk management in computing, teaching students to identify and mitigate potential issues. You will also learn about industry standards and best practices for consistent, quality work. You will learn about teamwork and strategies to operate in collaborative projects. The course concludes with a focus on career planning and lifelong learning.

Assessment: One two hour unseen written examination and coursework (Type I)

Agile software projects [CM2020]**

This module aims to provide insights and practice in software development using contemporary methods to produce software that meets the needs of users and supports an organisation's business function. The module will enable you to gain competence in the conceptualisation of a technology-based solution to a real-world problem, fulfilling the requirements of users and taking constraints imposed by the prevailing and foreseen market conditions and lessons learned from prototypes into account. You will then be given the opportunity to present a proposal for a technical project including a structured plan for implementing the solution using the agile development methodology and test driven development practices. During the whole process from concept to solution presentation, you will be required to work in a distributed team using online collaboration, project tracking and version control tools.

Assessment: Coursework only (Type III)

****Agile software projects [CM2020]** will be phased out and will run for the last time in October 2024. No further registrations will be accepted on this module after October 2024. The last opportunity to sit the assessment for this module will be October 2026. Module **Professional Practice for Computer Scientists [CM2045]** will replace Agile software projects [CM2020] and will run for this first time in April 2025

Computer security [CM2025]

This module aims to provide you with an understanding of the need for computer security and the technologies that support it. It has both a theoretical component that will teach you mathematical underpinnings of security systems and a practical element that will help you discover the pitfalls of security design and to comprehend the mathematics underlying the protocols by programming small examples.

Assessment: One two hour unseen written examination and coursework (Type I)

Graphics programming [CM2030]

This module aims to show you how to work with images in a variety of ways. You will learn how to synthesise graphics and how to process visual signals. You will learn about the mathematical ideas that underpin digital representations of graphics; how digital media files represent graphics, and how to handle and manipulate them; and the basics of working with simulated physics and 3D graphics.

Assessment: Coursework only (Type II)

Algorithms and data structures II [CM2035]

This module aims to provide you with detailed knowledge of several common algorithms and data structures. You will improve your understanding of searching and sorting and learn new algorithms to solve new problems. You will learn about a range of data structures such as trees, heaps, sets, maps, stacks, queues and graphs. You will learn how to evaluate and describe the performance of algorithms using big-O notation. You will learn: how to choose appropriate data structures for representing problems, how to define and implement algorithms for manipulating them, and how to analyse the correctness and efficiency of algorithms.

You will be expected to have mastered the material in Algorithms and Data Structures I before attempting this module.

Assessment: One two hour unseen written examination and coursework (Type I)

Databases, networks and the web [CM2040]

In this module, you will learn theory and practical skills focused on the modern web, internet and client-server applications. You will learn about relational database systems, mainly from a development perspective, emphasising issues related to data modelling and database implementation in SQL. You will learn how to model data in a database, retrieve data from the database and provide access to data through dynamic websites. In particular, you will learn about the Relational Model, Query processing, and socket architectures to enable communication.

Assessment: One two hour unseen written examination and coursework (Type I)

Level 6

Data science [CM3005]

By taking this module, you will gain a data science skillset. With these skills, you will be able to write computer programs that can read, process and analyse textual and numerical data. You will be able to generate plots and interactive visualisations of data. You will understand how to apply statistical methods to the interpretation of results. You will be able to use data analysis in the decision-making process. You will also learn about a range of application domains for data science.

Assessment: One two hour unseen written examination and coursework (Type I)

Databases and advanced data techniques [CM3010]

This module aims to show you how to work with data in your computer programs. You will learn how to use SQL and NoSQL databases to store tabular data and documents. You will learn about the ethics of gathering and processing data and why it is important to consider issues around data security. You will learn about open data resources, and how you can access them from your computer programs. You will learn about audio and video data, and the challenges of working with this kind of data.

Assessment: One two hour unseen written examination and coursework (Type I)

Machine learning and neural networks [CM3015]

This module provides a broad view of machine learning and neural networks. You will learn how to solve common machine learning problems such as regression, classification, clustering, matrix completion and pattern recognition. You will learn about neural networks and how they can be trained and optimised, including an exploration of deep neural networks. You will learn about machine learning and neural network software libraries that allow you to develop machine learning systems rapidly, and you will learn how to verify and evaluate the results.

Assessment: Coursework only (Type II)

Artificial intelligence [CM3020]

This module is focused on Artificial Intelligence techniques. You will understand the historical development of Artificial Intelligence including search, vision and planning. You will become familiar with the foundations of agent-based approaches to software design, decision making and problem solving including under uncertainty. You will have an opportunity to apply Artificial Intelligence techniques to particular problems such as game playing and decision making.

Assessment: One two hour unseen written examination and coursework (Type I)

Virtual reality [CM3025]

The module will combine the theory and psychology of VR with practical development skills. You will learn the skills needed to design compelling VR environments and the skills that apply to creative practice, science and industry.

This module aims to give you the skills needed to develop VR. These skills include understanding the basic theory of presence in VR, which underlies the basic design principles. You will also learn practical development skills, using an appropriate 3D engine to create interactive virtual environments. These skills will include creating 3D environments, designing and implementing 3D interaction for VR and building social VR experiences with interactive virtual characters.

Assessment: Coursework only (Type III)

Games development [CM3030]

This module will introduce you to i) industry standard tools for game development, such as game engines, and ii) the process of game development, including prototyping and playtesting. You will undertake a short series of game development projects, each lasting a set number of weeks and with a specific brief. For each project, you will propose a game that fits the brief, and then you will implement it. You are expected to deliver the proposed game and document it thoroughly. Through this process, you will develop an awareness of intended audience and the use of media for documentation.

Contemporary video game production draws on a range of techniques from artificial intelligence (AI) to perform tasks such as controlling virtual agents and generating novel game content. This module will also introduce crucial game AI concepts. Compared to mainstream AI, the emphasis is less on optimal problem solving and more on entertaining the player with limited computational resources. This module gives students practical experience of programming game AI systems and an understanding of the relevant theory.

Assessment: Coursework only (Type III)

Advanced web development [CM3035]

Through this module, you will learn how to build dynamic, data-driven websites using databases, front-end frameworks and server-side programming. This module provides the skill set required to do full stack web development work. By studying this module, you will develop a web developer skill set that enables you to understand how to build and deploy complete, data-driven websites. You will consider several different technologies for client side-web development such as HTML, CSS, JavaScript and templates. You will explore methods for developing server-side web applications, by building web-accessible wrappers around databases. You will consider issues of scalability, and learn about web application configuration and deployment.

Assessment: Coursework only (Type II)

Physical computing and the internet of things [CM3040]

This course provides an introduction to the development and programming of hardware devices that can sense and act in the environment. The course will explain and demonstrate how the environment, which is inherently continuous, can be monitored by analogue electrical and mechanical sensors, then captured and analysed using a computer, which is a discrete system. A focus of this course is the interface between the digital and the analogue.

This study encompasses basic physics, electronics, programming and software engineering. The practical objective of this course is the development of the skills needed for designing and building interactive physical devices.

Assessment: Coursework only (Type III)

3D graphics and animation [CM3045]

This module will cover advanced methods used in current state-of-the-art graphics and animation systems. It will include the mathematical foundations, computational techniques and their use in creative practice. By taking this module, you will learn how to write programs that generate animated 3D graphics. There are several distinct study areas: 3D modelling and animation, the graphics pipeline, simulation of physics and shader programming. You will study a range of examples, and through these learn how you can program computer graphics in contemporary graphical software for different applications.

Assessment: One two hour unseen written examination and coursework (Type I)

Mobile development [CM3050]

This module aims to give you the fundamental understanding and skills needed to develop mobile applications. By studying this module, you will learn the principles of effective mobile user interface design and how to design and build user interfaces. You will learn about data-driven mobile applications, and how you can integrate a mobile application to a data source. You will learn about the mobile development ecosystem and how you can develop, run and test your applications. You will learn how to work with various sensors available on mobile devices using built-in APIs. The style of the modules will be practical, with a focus on developing functioning applications.

Assessment: Coursework only (Type III)

Interaction design [CM3055]

When taking this module, you will examine the notion of 'interaction with technology'. You will focus on the concepts behind modern user experience design and production. You will gain a solid grasp and practical experience of the process which allows the creation of interactive systems. This process involves specification, design, prototyping and evaluation. You will examine several design approaches and techniques, and consider how they enable usability engineering. You will learn how to evaluate interactive systems against criteria such as efficiency and usability. You will examine issues of accessibility from the perspective of different populations.

Assessment: One two hour unseen written examination and coursework (Type I)

Natural language processing [CM3060]

This module will provide you with a grounding in both rule-based and statistical approaches to NLP, and it combines theoretical study with hands-on work employing widely used software packages. The module focuses on text processing, and by taking this module, you will learn about how you can work with text-based natural language in your computer programs. You will learn about grammars and how they can be used to analyse text. You will learn how statistical analysis can be used to extract information from and classify text. You will work in an appropriate programming environment for NLP, using libraries to implement NLP workflows.

Assessment: One two hour unseen written examination and coursework (Type I)

Intelligent signal processing [CM3065]

This module aims to provide you with a broad experience of digital signal processing techniques and applications. You will study how audio and video signals can be captured and processed by a computer program. You will learn about time domain and frequency domain representations and processing. You will learn how you can extract information from audio signals. You will implement movement and face detection systems that work with live camera input.

Assessment: Coursework only (Type II)

Final project [CM3070]

In this module, you will undertake a substantial independent project that will allow you to demonstrate a wide range of skills such as project planning, management, research, software implementation, and written presentation. If you are enrolled on a specialist pathway, either as part of the BSc or a graduate diploma, you will be expected to undertake a project in your specialist area. You will integrate the knowledge gained throughout the programme and use skills acquired in other modules in the implementation of your final project which will be in computer science or your specialist area. The work will consist of a combination of research and software development in various proportions. You will be expected to make use of methodologies from various components of computer science, including your specialist pathway if appropriate.

Assessment: One two hour unseen written examination and coursework

Appendix C – Assessment Criteria

Mark	Descriptor	Specific Marking Criteria
80-100%	I: First (Exceptional)	<ul style="list-style-type: none"> Represents an exceptional achievement beyond the standard requirements of a first class degree. Students' work should demonstrate considerable creative thought and be based on a critical evaluation of prior work. Work is likely to achieve some outcomes that would be expected at a higher level degree.
70-79%	I: First (Excellent)	<ul style="list-style-type: none"> Demonstration of a thorough grasp of relevant concepts, methodology and content appropriate to the subject discipline; indication of originality in application of ideas, in synthesis of material or in implementation; insight reflects depth and confidence of understanding of the material. Students should be able to design and create computer systems that demonstrate original design considerable independent thought and are based on independent learning of prior work and existing technologies. Students should be able to critically evaluate their own work.
60-69%	Ili: Upper Second (Very good)	<ul style="list-style-type: none"> Demonstration of a sound level of understanding based on a competent grasp of relevant concepts, methodology and content; display of skill in interpreting complex material; organisation of material at a high level of competence. Students should be able to demonstrate the ability to independently design, implement and evaluate a high quality and complex computer systems using knowledge from across the programme. Students should be able to effectively evaluate their work using standard methodologies.
50-59%	Ilii: Lower Second (Good)	<ul style="list-style-type: none"> Demonstration of an adequate level of understanding of relevant concepts, methodology and content; display of sufficient skill to tackle some complex problems; appropriate organisation of material. Students should demonstrate the ability to create moderately complex computer software, making use of prior knowledge and material taught within the program. Students should be able to, at least partially, test their work using standard methods.
40-49%	III: Third (Pass)	<ul style="list-style-type: none"> Represents the overall achievement of the appropriate learning outcomes to a threshold level (honours). Demonstration of a limited level of understanding of relevant concepts, methodology and content; clear if limited attempt to tackle problems; display of some skill in organisation of material. Students should demonstrate creation of a basic, complete and working computing system/ program.

**Programme Regulations 2024-2025 Computer Science and specialisms
(BSc, Graduate Diploma, Graduate Certificate)**

Mark	Descriptor	Specific Marking Criteria
25-39%	Fail	<ul style="list-style-type: none">• Represents an overall failure to achieve the appropriate learning outcomes.
10-24%	Bad fail	<ul style="list-style-type: none">• Represents a significant overall failure to achieve the appropriate learning outcomes.
1-9%	Very bad fail	<ul style="list-style-type: none">• A submission that does not even attempt to address the specified learning outcomes.
0%	Non submission or plagiarised	<ul style="list-style-type: none">• Work was not submitted or it was plagiarised.

Appendix D – Transfers from other University of London and Goldsmiths Programmes

Students registered to either the Computing and Information Systems or Creative Computing programmes are permitted to transfer to BSc Computer Science. If you wish to transfer, you must be within their registration period, and if your registration period has ended, the transfer will not be available to you.

Module transfers will include marks, and those marks will be listed on the BSc Computer Science transcript.

If you apply to transfer credit from the Computing and Information Systems or Creative Computing programmes, you will have the following options, depending on which stage of your studies you are in.

Level 4

Students at any stage of Level 4 can transfer onto the BSc Computer Science programme.

If you have finished all 120 credits at Level 4, you can transfer straight to Level 5.

If you have been awarded fewer than 120 credits, you are required to complete the number of credits of Level 4 on BSc Computer Science to make up to 120 credits altogether. This choice is subject to the following constraints:

- If you have done any of the modules in the first two columns of the Level 4 equivalents table below, you cannot do the modules in the right-hand column of the same row.
- You need to complete either Mathematics for computing [CO1102] (30 credits) or both of Computational mathematics [CM1015] (15 credits) and Discrete mathematics [CM1020] (15 credits).
- You need to complete either Introduction to Java and object-oriented programming [CO1109] or both of Introduction to programming I [CM1005] (15 credits) and Introduction to programming II [CM1010] (15 credits).

Level 4 Module Equivalents		
Computing and Information Systems	Creative Computing	Computer Science
Mathematics for computing [CO1102] (30 credits)	Mathematics for computing [CO1102] (30 credits)	Computational mathematics [CM1015] (15 credits) Discrete mathematics [CM1020] (15 credits)
Introduction to Java and object-oriented programming [CO1109] (30 credits)	Introduction to Java and object-oriented programming [CO1109] (30 credits)	Introduction to programming I [CM1005] (15 credits) Introduction to programming II [CM1010] (15 credits)

Level 4 Module Equivalents		
Computing and Information Systems	Creative Computing	Computer Science
Introduction to computing and the internet [CO1110] (30 credits)	Introduction to computing and the internet [CO1110] (30 credits)	How computers work [CM1030] (15 credits) Fundamentals of computer science [CM1025] (15 credits)
Information systems: foundations of e-business [CO1108] (30 credits)		
	Creative computing I: image, sound and motion [CO1112] (30 credits)	
		Algorithms and data structures I [CM1035] (15 credits)
		Web development [CM1040] (15 credits)

Level 5

Students studying Level 5 modules are permitted to transfer all of their Level 4 modules, plus, a maximum of two Level 5 modules (60 credits total).

For the remaining Level 5 Computer Science modules, if you have studied any of the modules in the first two columns of the Level 5 equivalents table below, you cannot do the modules in the right-hand column of the same row.

Level 5 Module Equivalents		
Computing and Information Systems	Creative Computing	Computer Science
Database systems [CO2209] [30 credits]	Database systems [CO2209] [30 credits]	Databases, networks and the web [CM2040] [15 credits] Cyber security [CM2025] [15 credits]
Graphical object-oriented and internet programming in Java [CO2220] [30 credits]	Graphical object-oriented and internet programming in Java [CO2220] [30 credits]	Object oriented programming [CM2005] [15 credits] Software design and development [CM2010] [15 credits]

Level 5 Module Equivalents		
Computing and Information Systems	Creative Computing	Computer Science
Software engineering, algorithm design and analysis [CO2226] [30 credits]	Software engineering, algorithm design and analysis [CO2226] [30 credits]	Agile software projects [CM2020] [15 credits] Algorithms and data structures II [CM2035] [15 credits]
Data communications and enterprise networking [CO2222] [30 credits]		
	Creative computing II: interactive multimedia [CO2227] [30 credits]	
		Programming with data [CM2015] [15 credits]
		Graphics programming [CM2030] [15 credits]
